## HIIIside Farm Renovation

Designed by: Luis Gabriel D. Bautista

## **DESIGN PROPOSAL**

The site is located on a sloped land with a wide land surrounded by local trees. With those in mind, the proposed design focuses on the feeling of being one with nature while achieving a contemporary rustic look with the residential building. Together, these strengthen the vision for users to enjoy the natural beauty of the plants and trees and the key features present.

The existing buildings present were kept intact and through the renovations, they became more cohesive to the theme. A warm experience with the elements of wood and stones makes the overall site have a contemporary and simplistic beauty.

## LANDSCAPE DESIGN

s adds up to the privacy of the owners. In addition, several trees are situated around the site for sunshade and overall a cool be in. There is also variety when it comes to the selection of trees. Kamagong tree provides volume and the majority of on the site. The Banaba tree adds to the ornamental aspect, especially in the flowering season with its cherry-blossom like . Lastly, the Manila paim gives variety and the beauty of tropical trees in humid countries.

Multi-leveled land makes the site more rigid which is why the balance of using a variety of plants and trees balances out overall. There are numerous key features like the elevated sitting area, infinity pool, and 2 small gardens. These elements give more charm to the place of their function and aesthetics. They give various spaces for the owners and people to enjoy both natural and man-made elements within the property.

focuses more on minimalist designs and colors. The stairway leading up the second floor welcomes you withare the living room. Several windows allow natural light to come through which is utilized greatly in the whole structure. Lastly, the kitchen and the dining table are a mix of minimal and wooden elements to highlight the importance of
